Part I

A Section with a Figure

An ordinary frame

- An item inside an `itemize` environment.
- Another item.
 - A Subitem.
 - Another, slightly longer subitem.
- And, at last, a final item.

A fancy block

This is the `fancyblock` environment provided by *anthem*. It can be customized with *mdframed* options (as seen below).

Intermezzo

A Special Section with a Figure

About the Special Sections

- If you want to have a section title page with some other addition to the section title than the default "Part ..." (such as e.g. "Aside" or "Intermezzo"), you can use the `\specialsectionpage{addition}{title}` command.
- You should not declare this "special section" with `\section`, otherwise the **numering might not be correct**.
- Unfortunately this means, that the special section will not show up in your PDF reader's table of content. I hope I can soon implement this feature in a much nicer way.
